

Bitcoinace

After the successful projects of the past years of our company, we will soon launch the major project Bitcoin Ace or (Bitis).

Bitcoin Ace: A peer-to-peer electronic cash system like Bitcoin with a dedicated blockchain with close to zero fees.

This project is designed and built to make its shareholders rich, and users who support this project will soon become rich.

How will they become rich?

Given our successful projects and the small number of coins and the low pre-sale price and listing on all exchanges, the price of each coin will probably increase by several thousand times after the project starts.

Suppose if we pre-purchase \$1,000, after the project starts, it will reach \$1,500,000 in the worst case.

Bitcoin Ace Features

1: Has a peer-to-peer blockchain and a dedicated wallet

2: Has a dedicated exchange for buying, selling and depositing coins

3: Has a dedicated bitace messenger with a built-in wallet for buying and transferring coins in the messenger. A messenger like Telegram but with more features

Bits coin will be pre-sold in several times in the bitace ico, the price will gradually increase.

If you encounter a problem in registering and purchasing Bitcoin Ace, or have a question or problem, our support is ready to help you 24 hours a day.

Message our support from within the ico website so that they can complete all the registration steps for you.
